Developments in International Labour Statistics: Amazon.co.uk Organisation for Economic Co-operation and Development OECD. The International Labour Organisation ILO considers people of working age to be in one of the three following labour states: employed, unemployed, or not in the labour force. The employment state includes individuals who are gainfully employed or self-employed. The unemployment state includes individuals who are not gainfully employed but are available for work and actively seek employment. The not-in-the-labour-force state includes individuals who are not actively seeking work or are not available for work. The International Labour Office (ILO) publishes statistical data on labour and related issues, including employment, unemployment, and working conditions. The data are collected through various sources, including national statistical agencies, international labour organizations, and other relevant entities. The ILO also collates and disseminates international labour statistics, including those related to the Sustainable Development Goals (SDGs), the International Labour Organization (ILO), and the International Labour Office (ILO). The ILO's database on labour statistics includes key indicators of the labour market, such as employment, unemployment, and earnings. The database provides information on the most important developments of the EU-LFS, describes the standards prepared by the International Conference of Labour Statisticians (ICLS), and provides a description of the Australian Bureau of Statistics. The database is available for download and can be searched through the ILO's statistical data explorer. The International Labour Office (ILO) is a specialized agency of the United Nations, and its mission is to promote social justice and decent work. The ILO's data and statistics are used by governments, employers, and workers to inform policy decisions and improve working conditions. The ILO's database on labour statistics is a valuable resource for anyone interested in understanding the global labour market and the challenges faced by workers around the world.
