George Saliba On his book Islamic Science and the Making of the European Renaissance, he challenges a number of generally held views which he calls "classical." In his recent book titled Islamic Science and the Making of the European Renaissance, he presents a new perspective on the rise and fall of scientific activity in the Islamic world.

Islam's scientific tradition has been described many times in accounts of Islamic civilization and general histories of science, with most authors tracing its origins from Classical Greece up to Renaissance Europe. Islamic Science and the Making of the European Renaissance is the culmination of a lifetime of archival research by Saliba in European, Near Eastern and Islamic Science and the Making of the European Renaissance.
